

# Crash Data Retrieval Tool - Version 26.2 Software

## What's New in v26.2?

Stay ahead of evolving vehicle technology with Bosch CDR v26.2!

As vehicle systems continue to advance, investigators need reliable tools capable of accessing critical crash data quickly and accurately. CDR v26.2 builds on Bosch's commitment to providing industry-leading EDR retrieval capabilities while improving usability, workflow efficiency, and platform modernization.

This release marks a major milestone in the transition to the next-generation CDR2 application. Most vehicle brands, system coverage, and vehicle/cable lookup functionality have now been migrated to CDR2, making it the primary platform for CDR data retrieval. In addition, several new productivity features have been introduced to streamline report management and improve the overall user experience.

## CDR Next Generation Application (CDR2)

The CDR v26.2 installation package includes both the CDR Legacy application and the CDR2 Next Generation application. Both applications are installed automatically when the *CDR26.2.1823 Setup* program is executed.

*For further information about using the CDR2 application, refer to the document named: CDR2\_Product\_Information6.pdf.  
- included in the CDR26.2Setup.zip file.*

## New Features Available in CDR2

This release introduces several enhancements designed to improve workflow efficiency and report management:

- **Edit Comments in Existing Reports**  
Users can now modify comments in

previously downloaded reports. Updated reports are saved as new files, preserving the original report for reference.

- **Select Default Download Folder**  
Configure and change the default location where downloaded reports are automatically stored.
- **Open and Preview Existing CDRx Reports**  
CDR2 now supports opening and viewing previously generated CDRx reports directly within the application, providing improved accessibility and compatibility.

## Migration of Legacy CDR Coverage to the CDR2 Application

CDR2 is now the primary Bosch CDR platform.

- Vehicle and cable lookup information for all supported brands has been migrated to CDR2.
- Most system coverage has also been migrated to CDR2.
- Systems that are supported exclusively through *CAN Plus* remain available only in the *CDR Legacy* application.

## New Report File Enhancements

To support the migration to CDR2, report file handling has been updated:

- *CDRx files* now open directly in CDR2.
- When a CDRx report is modified (for example, comments are edited or TVV information is added), CDR2 creates a new *CDRnx* file while preserving the original CDRx report.
- *CAN Plus* downloaded CDR reports continue to open only in CDR Legacy.

- A new **CDRcx** file format has been introduced for CAN Plus systems.
- CDR Legacy now supports only CAN Plus systems and creates CDRcx files instead of CDRx files.

## Continued Expansion of Retrieval Coverage

Bosch continues to expand EDR retrieval support across additional vehicle platforms, model years, and technologies. This release further strengthens the transition to the CDR2 platform while ensuring investigators and reconstruction experts have access to the critical crash data needed for accurate and efficient investigations.

### 26.2 Coverage Summary

Our newest update introduces one of the largest coverage expansions to date, adding support across North America, Europe, China, Japan, South Korea, Australia/New Zealand, and other global markets. This release significantly expands Airbag Control Module (ACM), Forward Camera Module (FCM), Occupant Classification System (OCS), Active Safety Control Module (ASCM), Driver Camera Module (DCM), Passenger Protection Module (PPM), and China Unified Data Retrieval (UDR) support across numerous vehicle platforms.

- Expanded support across 30+ *manufacturers*.
- Added support for *hundreds of new vehicle/model-year combinations*.
- Significant expansion of *Audi, BMW, Porsche, Volkswagen Group, Honda, Mazda, Mitsubishi, Subaru, Ford, GM, Stellantis, and Toyota* coverage.
- Added new retrieval support for *ACM, FCM, OCS, ASCM, DCM, PPM, and China UDR* systems.
- Increased support for *2027 and 2028 model year vehicles*, helping investigators stay current with emerging vehicle technologies.

**Software Compatibility with CDR Devices**

**CDR 900** - This software version is compatible with the supported vehicle information in the product, provides coverage information regarding CDR 900 supported vehicles.

**CDR 900 & VPN Compatibility** - Due to the network-centric nature of CDR 900 VCI communication, direct CDR 900 connectivity is generally not supported or guaranteed when a Virtual Private Network (VPN) client is active or installed on the host PC.

**CDR 500** - This software version is compatible with all CDR 500 units in the field.

**CANplus** – The CANplus device is no longer sold but can be rented through CDR Tool distributors. Bosch continues to support devices in the field and can be used on vehicles listed in the *Support Vehicles* list in the CDR2 application.

**Is Your CDR System Hardware Up to Date?**

To take full advantage of this new software version, you need to obtain the new CDR Cables released up through CDR Version 26.2. You also need to make sure your CDR hardware is up to date. If your CDR Tool has not been updated recently, refer to the Checklist for v26.2 which can be found on the Bosch Diagnostics CDR website located at <https://cdr.boschdiagnostics.com/cdr/>.

Contact your CDR tool distributor if you have any questions about the CDR products or need to order new hardware or a software subscription.
